## **Diamond WTG Engineering & Services, Inc. Performs End of Warranty Inspections on GE 2.5 MW in Ohio**

*End of warranty inspections underscores Diamond as a trusted Independent Service Provider supporting all brands of wind turbines across the nation.*

(Portland, OR – July 24, 2020) In July 2020, the inspection teams completed over 40 End of Warranty Inspections on a GE 2.5 MW Platform in Ohio

We are proud that Diamond has been selected to perform the end of warranty inspections. Their decision reflects the quality of our technicians, our knowledge of wind turbines, and the trust the customer has in our wind turbine inspection capabilities.

Diamond's inspection of over 100 MW wind project underscores Diamond's role as a top tier Independent Service Provider ("ISP") for multiple turbine brands. As part of the Mitsubishi family, Diamond brings to customers a unique combination of industry experience, service offerings, and engineering capability.

The outbreak of Covid-19 was an unexpected element enforcing the companies and US State recommendations to implement strict safety measures and adapt strict site management to be able to complete the job safely and unaffected. Diamond was able to comply with all requirements and execute safely.

Mr. Tallman continued, "Diamond will continue to expand its ISP business by offering services for multiple brands of wind turbines."
